Solutions Architect | Lead Full-Stack Engineer | Software & Product Engineering | Team Management

Executive Snapshot

- Solutions Architect and Full-Stack Engineering professional with over 6 years of experience shaping technology strategy, architecting scalable digital products, and driving end-to-end software delivery across AI, Fintech, and enterprise technology environments.
- Skilled in architecting AI-first and cloud-native solutions leveraging LLMs, Agentic AI, RAG, MCP applications, and intelligent automation to transform business workflows, accelerate product innovation, and enhance engineering productivity.
- Expertise in driving product architecture and engineering for high-value platforms, including a multi-chain crypto wallet and autonomous trading-agent marketplace exceeding $1.5M in TVL, while delivering scalable APIs and financial transaction capabilities.
- Combining hands-on engineering depth with architectural ownership across frontend, backend, distributed systems, APIs, databases, cloud infrastructure, and DevOps, enabling robust, scalable, and production-ready product ecosystems.
- Capable of building and commercializing AI-powered products that automate operational workflows and intelligent decision-making, including solutions that achieved an 80% reduction in hiring noise and created new revenue opportunities.
- Excellence in providing technical leadership across product engineering initiatives, including leading a 12-member engineering team, driving hiring and mentoring, establishing reusable engineering platforms and design systems, and delivering automation that reduced QA decision time from 13.5 to 5 seconds.

Core Competencies

Strategic Technology & Leadership	Product & Engineering	Delivery & Business Enablement
Technology Strategy	Product Development	End-to-End Technology Delivery
Solution Architecture	Software Engineering	Stakeholder Management
Technical Leadership	Application Architecture	Process Optimization
Digital Transformation	Technology Innovation	Business-Technology Alignment

Technical Skills

AI / ML: LLMs, SLMs, Agentic AI, RAG, MCP Apps, MLOps, Fine-Tuning
Languages: Python, Go, TypeScript
Frameworks: React, Next.js, Node.js, FastAPI, Gin, Django
Databases: PostgreSQL, DynamoDB, Redis, Firestore
Cloud & Tools: AWS, GCP, Azure Bot Service, Docker, Kubernetes, Git

Certifications

- ISO/IEC 42001 - AI Management Systems, Certified Auditor in 2026 | Link
- ISO/IEC 27701 - Privacy Information Management, Certified Auditor in 2026 | Link
- AWS Solutions Architect-Associate in 2023 | Link

Education

- Executive Programme in Strategic Management with 85.6% | IIM Kozhikode | 2026
- B.Sc. in Computer Science with Specialization in Cyber Security (First Class) | Vels Institute of Science & Technology, Chennai, India | 2023

Professional Experience

Elyts Tech, Dubai, UAE | Solutions Architect — Since Nov'25

- **Product Architecture & Delivery:** Owning architecture and end-to-end delivery for Tanat.app, a multi-chain crypto wallet, and Deploy.finance, an autonomous trading-agent marketplace with $1.5M+ TVL.
- **MCP & Financial Infrastructure:** Developing an MCP application powering swap, bridge, and on/off-ramp capabilities for Deploy.finance, managing 10K+ API requests/month.
- **AI Product Engineering & Commercialization:** Building HireHouse and Hourglass AI tools to automate daily operations, reducing hiring noise by 80% through multi-stage AI filtering while commercializing both products to establish a new revenue stream.

- **Engineering Leadership & Delivery:** Leading and scaling a 12-member engineering team, driving hiring, mentorship, technical direction & delivery execution.
- **Solution Architecture & Scalability:** Architecting scalable and resilient software solutions aligned with business objectives and product requirements.
- **Application Development & Delivery:** Spearheading end-to-end application development and technology delivery across complex engineering initiatives.
- **Business Requirements & Technical Design:** Translating functional and business requirements into scalable technical designs and implementation strategies.
- **Stakeholder & Cross-Functional Collaboration:** Orchestrating cross-functional collaboration across engineering, product, and client stakeholders to ensure seamless delivery.
- **Technology Innovation & Automation:** Driving technology innovation by identifying opportunities for AI adoption, automation, and process optimization.

PieLabs Inc | Full-Stack Engineer-AI May'24-Oct'25

- **Computer-Use QA Engineering:** Developed a computer-use QA agent, reducing per-step decision time from 13.5 seconds to 5 seconds.
- **UI Interaction & Targeting:** Implemented bounding-box targeting for precise UI element interactions, eliminating manual correction from the workflow.
- **AI Infrastructure & Multi-Agent Orchestration:** Managed Kubernetes-based infrastructure for orchestrating multi-agent workflows across heterogeneous device environments, including Android, iOS, macOS, and Windows, enabling scalable and isolated execution.
- **Real-Time Agent Monitoring:** Developed a front-end experience for streaming live previews of AI agents testing applications, supporting concurrent sessions with sub-millisecond real-time synchronization using Firebase Realtime Database.
- **LLM Observability & Monitoring:** Architected an internal platform for logging and monitoring LLM inputs, outputs, and token consumption.
- **Model Training & Data Operations:** Established a human-in-the-loop labeling portal to support model fine-tuning and high-quality training data generation.

SM Technology | Senior Full-Stack Engineer Feb'22-May'24

- **Full-Stack Development & Reusable Architecture:** Delivered solutions across 12 major projects and engineered standardized, reusable business modules that could be seamlessly integrated into new projects, reducing development effort and accelerating project deliver
- **Data Engineering & Analytics:** Served as a Data Engineer for clients including HTeaO and Faber, building optimized ETL pipelines using Apache Airflow and developing data visualization and reporting solutions using Power BI.
- **Platform & Design Systems:** Developed a company-wide design system to improve UI consistency and reusability, and built a centralized Control Center to streamline workflows and operational visibility for the support team.
- **Engineering Leadership:** Managed and mentored junior engineers, providing technical guidance, training, and support throughout the software development lifecycle.

Orbital | Junior Software Engineer Jun'20-Feb'22

- **Front-End Product Development:** Worked as a Front-End Engineer across four major products: Restricted Currencies, Client Connect, Global Payments, and Pay Perform. Participated in business discussions and product requirement planning to design, develop, and deploy technical solutions.
- **Operations & Financial Automation:** Developed internal applications that automated the Operations team's daily BAU activities and financial reconciliation workflows, improving operational efficiency and reducing manual processes.
- **Reporting & Business Insights:** Built a detailed reporting interface providing stakeholders with visibility into current activities, operational performance, and consolidated business summaries.
- **Design System Standardization:** Contributed to the company's Pay Perform Design System by building reusable UI components on top of Ant Design (AntD), standardizing the user experience and improving UI consistency across projects.

▣ Projects

◇ **Syndicate:** Engineered an AI news archiver integrating Gmail, RSS, and Twitter with cross-channel deduplication, SLM summarization, Git-based JSON publishing, and a zero-cost static PWA; included a Claude plugin with 11 skills.
Tech: Python, DSPy, Ollama, Gemma 3, React, PWA. | Link

◇ **Hirehouse:** Developed a chess-inspired hiring platform combining resume scoring and AI video rounds to surface top-tier finalists.
Tech: Next.js, Go, PostgreSQL, Firebase Authentication, Minimax-M3, Redis, Docker. | Link

◇ **Hourglass:** Built a unified platform for timesheets, leave, and IT expense tracking with AI-powered Microsoft Teams standups and proactive task follow-ups.
Tech: Next.js, FastAPI, DynamoDB, Lambda, AWS Scheduler, Azure Bot Service, Gemini 2.5 Flash-Lite. | Link

◇ **DSAVisually:** Developed DSA Visually, an interactive platform that visualizes core data structures and algorithms through dynamic, hands-on simulations to make complex computer science concepts easier to understand.
Tech: React.js, CSS, Bootstrap, Framer motion | Link
